Food/Drug/Pet Recall: TDBBS

As a precautionary measure, TDBBS is conducting a voluntary recall of a limited distribution of two pig ear pet treat products sold through Amazon.com - USA Thick Pig Ear 8 Pack and USA Thick Pig Ear 20 Pack.

This recall has been initiated due to possible Salmonella contamination, which poses a health risk. It is important to know that no illnesses have been reported, and the amount of affected product is minimal.

The company has ceased the production and distribution of this product and, in cooperation with the FDA, continues to investigate the situation further. TDBBS's product safety team is conducting its own stringent review to identify what measures can be established to prevent this situation from recurring.

TDBBS provided the following information about specific products recalled:

This recall is the result of routine sampling conducted by the Michigan Department of Agriculture & Rural Development. The sample bag tested positive for Salmonella. Salmonella can affect animals eating the products, and there is risk to humans from handling contaminated pet products, especially if they have not thoroughly washed their hands after having contact with the products or surfaces exposed to these products.

This product was shipped to customers between April 22, 2019, and August 13, 2019. Customers should dispose of any USA Thick Pig Ear 8 Pack and USA Thick Pig Ear 20 Pack from these shipments.

Healthy people infected with Salmonella should monitor themselves for some or all the following symptoms: nausea, vomiting, diarrhea or bloody diarrhea, abdominal cramping and fever. Rarely, Salmonella can result in more serious ailments, including arterial infections, endocarditis, arthritis, muscle pain, eye irritation, and urinary tract symptoms. Consumers exhibiting these signs after having contact with this product or a pet that has eaten the product should contact their healthcare providers.

Pets with Salmonella infections may be lethargic and have diarrhea or bloody diarrhea, fever, and vomiting. Some pets will have only decreased appetite, fever and abdominal pain. Infected but otherwise healthy pets can be carriers and infect other animals or humans. If your pet has
